*Proceeds from sales made in ...For Good Hope are donated to the  
Non-Profit Organisation Thembelihle Centre for CP (218-566 NPO)*

---

## **About Us**

...For Good Hope sells various items relating to therapy, health, wellness and independence, all whilst supporting a cause!

...For Good Hope was started by Claudia Menezes, an Occupational Therapist based in the KZN Midlands. We strive to promote supportable and independent lifestyles for those with a disability, therapeutic need or those whose reality needs to be accommodated/ assisted/ adapted through the use of our products.

I firmly believe that one of the most amazing and unique aspects of Occupational Therapy are Assistive Devices; and therapy wouldn't be complete without considering whether a client would benefit from one.

Assistive Devices can successfully provide a balance between optimising and making the most of the abilities that the client already possesses, whilst maximising their independence; and ultimately their quality of life.

After working in the UK, I realised how Assistive Devices play a major role in therapy and caregiving (definitely, first world!); more so than in South Africa. I struggled to find Assistive Devices in South Africa; and when I did, they were imported from companies based overseas. This results in them being very overpriced due to our unfavourable exchange rate, taxes, air freight, import duty, courier charges etc.

**These obstacles limit the accessibility and availability to many South Africans.**

...For Good Hope strives to change this! We source all raw materials locally, from South African businesses and factories; and we manufacture products either in our in-house studio or in various factories in KZN, depending on the machinery needed.

We strive to source the cheapest raw materials as possible whilst not compromising on the quality of the product in order to keep the products affordable. We hope that this little business can solve the barriers that we have faced with purchasing Assistive Devices in the past.

## **Support Our Cause!**

Proceeds from each sale made in ...For Good Hope are donated to a Non-Profit Organisation, also founded by Claudia; called Thembelihle Centre for CP (Registration Pending). We will provide equipment and therapy services to children living with Cerebral Palsy in rural areas. Thembelihle is a Zulu word which translates to “good hope”. This word encompasses the potential and prospect for a child with CP, which can be reached with the help of an accessible and supportive environment that Thembelihle strives to provide. This also allows individuals to support a cause in their everyday life, through each purchase made. Each item bought by individuals and businesses will symbolise their contribution in fighting against the battle that families in rural areas bear in raising a child with Cerebral Palsy in South Africa.

...For Good Hope was started as a means to fund our NPO; but also as a passion. We love creating things and seeing our products making a difference in individuals' lives and their independence, whilst adding value to one's purpose.

The ...For Good Hope logo is a cactus. A cactus symbolises endurance; the fact that it has adapted in harsh conditions and conquered. As health practitioners or individuals living with a disability, we too have to adapt and conquer, endure and thrive in harsh conditions, and stay determined to life itself.

## **How to Order**

Please visit our Website ([www.forgoodhope.co.za](http://www.forgoodhope.co.za)) in order to place an order.

Alternatively, please contact Claudia Menezes via the following methods if you require assistance:

Email: [info@forgoodhope.co.za](mailto:info@forgoodhope.co.za)

Call/ Whatsapp: (+27) 72 013 8294

## **Courier Options**

Subject to availability and receipt of payment, our turnaround time is between 7-10 business days. However, we try our best to fulfil order deliveries before the given time.

We make use of The Courier Guy and PUDO Courier.

All products are checked and sealed securely before being shipped. We cannot be held liable for any delays or loss by the Courier Service. All products are at the client's risk once it has left our premises.

**Please note:** We are situated 45 minutes from our nearest town; outside of any Couriers' radius! We, therefore, travel this distance to Courier orders. Orders are couriered once per week. Should you require any special delivery instructions/ urgent deliveries, please contact us before placing your order and we will do our best to try and accommodate you.

---

We currently offer the following Courier options:

### **Courier to your Door (The Courier Guy)**

- **Cost within KZN:** R60 for deliveries of small parcels and R85 for deliveries of larger parcels.
- **Cost outside of KZN:** R85 for deliveries of small parcels and R99 for deliveries of larger parcels.
- Delivery will never usually be more than the above pricing; and if it is, we usually carry the cost. However, if we find that the Delivery Address provided is in a rural/ outlying area which will cost quite a lot more than the quoted amount, the customer will be contacted in order to either pay the surplus or change the delivery method to PUDO Courier.
- **Delivery Time from Date of Dispatch:** 3-5 working days in major centres; outlying areas might take a little longer.

### **Locker to Locker Courier (PUDO)**

- **Cost:** R60 Flat Rate
- **Delivery Time from Date of Dispatch:** 3-7 working days

### **Free Shipping**

- Spend R700 or more and receive Free PUDO or Door-to-Door Shipping!
- Please note: This does not apply to Sales
- For rural/ outlying areas or farms, Courier may cost a lot more than R99! In these instances, the customer may need to cover the surplus or change the delivery method to PUDO Courier.

**If you're unsure about Delivery and would like some guidance or a quote, please do not hesitate to Contact us!**

## The Walker Carryall

During Physio- or Occupational Therapy, we often practice the use of a walking frame and incorporate its' use during Activities of Daily Living; but we often overlook the “simple task” of carrying objects from room to room whilst using the walking frame. It is an integral aspect! The carryall aims to serve that purpose whilst ensuring uninterrupted concentration when using the frame, thus preventing falls. The walker carryall ultimately provides the user with a little more independence.

### Features

- The walker carryall is made with industrial sewing and overlocking machines; ensuring durability and reliability of the stitching and manufacturing process.
- The design of the carryall comprises of 5 differently sized pockets to fit various items such as magazines, books, a pen, glasses, a purse/ wallet etc.
- There is Velcro on the back of the carryall and ties on the side, to ensure the carryall stays securely on the walking frame.
- 100% Cotton material is used.
- We currently have two colours available, as shown below: Floral and Blues.

**Price: R249**

---

## The Universal Cuff

**Our Universal Cuffs are the only Universal Cuffs in South Africa which are locally and industrially made.**

### Purpose

- Used to give individuals with limited hand function (strength/ grip/ dexterity) the ability to have a more controlled use of items
- Provides someone with the independence to function in common activities of daily living (ADLs).
- Items which can be placed in the pouch include (but are not limited to) eating utensils, a toothbrush, writing tools, craft tools and a stylus pen.

---

## **Features**

- The Universal Cuff is made with high quality materials and an industrial bartack stitch machine, making it durable and reliable.
- Polypropylene Webbing is used as this material repels water, is easier to clean and is more mildew resistant than nylon webbing. The comfortable strap keeps the cuff secured onto the hand. The pouch is situated on the palmer aspect of the hand.
- The cuff is adjustable for good fit using hook and loop Velcro®. If swelling in the hand fluctuates, the cuff will always fit due to its adjustable nature. A metal D-Ring is used for the user to hook onto their finger when donning and doffing; ensuring easy closure and adjustment of the cuff. Metal fittings are used to ensure durability.
- The cuff can be worn on the left/ right hand.
- Black is the only colour available until further notice.
- Each Universal Cuff is individually packaged with instructions for the user.

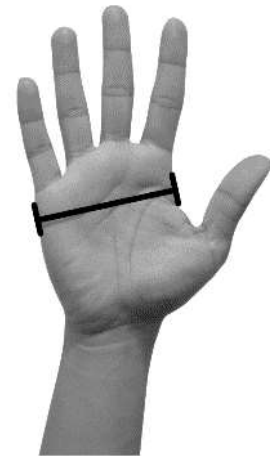

## **Sizing**

Measure the hand across the metacarpophalangeal joints (MPJ's)/ "knuckles" to determine the correct size. Our Small would usually fit children and the Large would usually fit Adults. However, it is advisable to check before submitting your order, as this is not always the case due to muscle wasting etc.

Small: 6.5cm – 8.5cm hand width

Large 25mm: 8.5cm – 10.5cm hand width

Large 30mm: 8.5cm – 10.5cm hand width

In the **Large** size, we have two Webbing Widths available:

25mm Wide Webbing - for eating utensils, writing tools and a stylus pen.

30mm Wide Webbing - for larger utensils/ tools such as a toothbrush etc.

**Price: R95 each**

**For orders of 5 or more Universal Cuffs, a 5% discount applies.**

**For orders of 10 or more Universal Cuffs, a 10% discount applies.**

---

## The Built-Up Handle

### Purpose

- The Built-Up Handle provides an improved grip for a more controlled use of items for individuals with poor coordination, decreased strength in the hand, or a limited range of motion in the joints of one's hand.
- It ultimately provides someone with the independence to function in common activities of daily living (ADLs) and certain leisure activities.
- The Built-up Handle instantly creates a larger, more rounded and softer gripping surface on various utensils/ tools.
- The handle fits comfortably in the hand and reduces potential pain and cramping which is often caused by over exertion of the joints of the hands.
- Items which can be placed in the handle include eating utensils, a toothbrush, writing tools, a stylus pen, and craft tools such as crochet hooks and knitting needles etc.
- Built-Up handles are most commonly used with conditions such as Cerebral Palsy, Hand Injuries, Amyotrophic Lateral Sclerosis (ALS), Parkinson's Disease, Ehlers-Danlos Syndrome, Rheumatoid Arthritis, and Multiple Sclerosis, to mention a few.

## **Features**

- Our Built-Up Handles are made from closed cell foam; which ensures NO liquid/ moisture is absorbed into the foam. This eliminates the growth of bacteria.
- Utensils/ Tools slide easily into the foam tubing.
- Black is the only colour available until further notice.
- Each Built-Up Handle is individually packaged with instructions.
- Please note: If you require a small tool/ utensil to be used in an activity, but require a large outer diameter as the handle, the SMALL size fits into the LARGE and EXTRA-LARGE sizes.

## **Sizing**

It comes in four sizes, with different inner and outer diameters to fit a variety of different sized objects.

Small: 0.8cm Inner Diameter; 2cm Outer Diameter; 0.6cm Wall Thickness

Medium: 1cm Inner Diameter; 2.4cm Outer Diameter; 0.6cm Wall Thickness

Large: 2cm Inner Diameter; 3.4cm Outer Diameter; 0.6cm Wall Thickness

Extra-Large: 2cm Inner Diameter; 3.6cm Outer Diameter; 1cm Wall Thickness

The Built-Up Handle comes in three length options so that one can purchase just how much is needed! We have 50cm lengths, 40cm lengths and 20cm lengths. They can then be further cut into the desired lengths to suit one's individual needs. A single length can also, therefore, be used for multiple utensils and tools.

The Handle only really needs to be as long as the hand/ fingers holding it, so a little bit goes a long way! For instance, a pen grip only needs to be approximately 5-8cm depending on the user; it does not need to cover the length of the pen.

## **Pricing**

	<b>50cm</b>	<b>40cm</b>	<b>20cm</b>
<b>Small, Medium, Large, Extra-Large</b>	R50	R40	R20

**R150 for four 50cm lengths; one of each size (1 x S; 1 x M; 1 x L; 1 x XL)**

---

## The Microwavable Heat Bag

### Purpose

- There are significant benefits for using heat therapy to supplement other forms of treatment.  
The application of heat is most commonly used for:
  - the reduction of pain (chronic pain, joint/ arthritic pain, pain due to injuries, post-operative pain etc.)
  - to soothe muscular tension in muscles which have been overexerted as well as to improve the flexibility of sore and stiff muscles
  - to relax stomach cramps (menstrual cramps, cramps associated with Endometriosis and PCOS etc.)
- The microwavable heat bag provides deep penetrating warmth to the specific area it is applied to. When heat is applied, blood flow increases to that area. This causes blood vessels to open, which allows for blood and oxygen to flow faster to this specific area where pain is experienced. Heat therapy also tends to reduce muscle spasms, causing the muscles, ligaments, and tendons to relax.
- Our microwavable heat bags can be used in Occupational Therapy and Physiotherapy practices, Orthopaedic practices, beauty salons as well as at home.
- This form of treatment is a safe, natural, drug free and very inexpensive solution to pain.

### Features

- The microwavable heat bags are filled with locally sourced natural Whole Wheat or Buck Wheat (depending on availability).
- There are four sizes: Small, Medium, Large and Neck

- The microwavable heat bags are made with industrial sewing and overlocking machines; ensuring durability and reliability of the stitching and manufacturing process.
- Seams are double stitched around the heat bag; and triple stitched between the divisions to ensure the wheat stays securely in the heat bag.
- The design of the heat bag comprises of a multi-sectional inner bag, which ensures the wheat is evenly spread; thus providing proportionate heat distribution; as well as a removable outer cover which allows for easy laundering.
- 100% Cotton material is used as this material can withstand high heat.
- Our heat bags provide a very effective method of delivering heat gradually and evenly to the area being treated as the bags mould easily to the shape required and retain temperature for an extended period of time.

## **Precautions**

It is advisable to consult with your Doctor to be evaluated for your pain management/ and other health related aspects (poor circulation, nerve damage, skin conditions etc). Their advice is of utmost importance before use of the product.

This heat bag is not suitable for:

- Infants
- Individuals with Diabetes
- Individuals with decreased sensation
- Wounds/ Areas of broken skin

Supervision is required if the heat bag is being used by individuals who are unable to apply/ remove the heat bag on their own; especially when being used by the elderly or individuals with disabilities.

As with any heat product, heat bags have the potential to cause skin irritation or burns, particularly to the sensitive thinner skin of the elderly. Do not use for long periods of time on the same area. Discontinue use if skin sensitivity or irritation occurs.

Allergen Info: contains wheat

## **Pricing**

The removable covers (which do not go into the microwave) are made of various types of fabric and are priced accordingly. Fabrics are subject to availability; and we cannot guarantee continuation of designs. We are **always** getting new fabrics in for our Microwavable Heat Bag covers, as they are definitely a fast seller!

We have Regular covers which are usually a thinner cotton/ linen or a mini matt type of fabric. Our Deluxe Covers are a thicker cotton/ linen fabric. Microwavable Heat Bags with Deluxe covers are priced higher than those with Regular Covers, due to the difference in cost of the fabric. Please see pricing of each size to follow.

### **Small**

Regular - R135

Deluxe - R150

Extra Covers - R40/ R60

The Small size is great for smaller areas of the body. They are great for hand injuries and are commonly used in Occupational Therapy Practices.

### **Medium**

Regular - R170

Deluxe - R190

Extra Covers - R50/ R70

The Medium size is great for targeting specific larger joints as it can easily wrap around the joint to cover the full surface area. They are great for wrists, elbows, knees, ankles etc. The Medium size is commonly used in Occupational Therapy and Physiotherapy Practices.

### **Large**

Regular - R220

Deluxe - R240

Extra Covers - R60/ R80

The Large size is great for larger areas of the body; the back, abdomen, shoulders etc. They are commonly used in Physiotherapy Practices.

### **Neck**

Regular - R175

Deluxe - R200

Extra Covers - R50/ R70

The Neck size is great for neck aches and pains! They are commonly used in Physiotherapy Practices.

---

## **Custom Orders**

We have done Custom Orders for those that would like to create something bespoke; as in the image (a neck and shoulder Microwavable Heat Bag in one).

Do you need something bespoke; in a specific pattern/ size? Email us ([info@forgoodhope.co.za](mailto:info@forgoodhope.co.za)) to discuss your requirements. We would love to help you find your perfect fit!

Should you wish to purchase an extra cover, contact us!

## **Consignments**

Our Microwavable Heat Bags are stocked in a few Consignment Locations throughout KZN. If you have a practice/ shop and you would like to stock our Heat Bags on Consignment, please contact us and we can send through more information about this. You are only required to pay us once the stock is sold and you get a % of the profits too! It's a win-win!

Our Small and Medium sizes are most commonly used in OT Practices; and our Medium, Large and Neck are commonly used in Physiotherapy Practices.

---

## **Tossing Bean Bags**

### **Purpose**

Tossing Bean Bags are a must-have resource in every therapy room, classroom, play area and home for every therapist, teacher, parent/ guardian and nanny/ caregiver. It is a fun and inexpensive resource and the activity possibilities are endless which can assist in the development of a range of skills.

### **Features**

- Our Bean Bags are made with industrial sewing and overlocking machines; ensuring durability and reliability of the stitching and manufacturing process.
- All Standard Bean Bags are 100% Cotton, a high-quality material.
- The Bean Bags are filled with recycled plastic (Linear Low-Density Polyethylene Pellets) - No plastic was created in the process!

We have compiled bundles, including bulk-bundles especially for practices and schools that wish to buy larger amounts; thus saving money. Commercially, the average price of a Bean Bag is R30; and there aren't many games that you can play with just one, making it a bit pricey in the long run! So, we have made ours a lot more affordable; and even more so through bundle-buying; with some bundles working out to less than R22 each! If there are any bundles that we haven't thought of, contact us and we can make one up for you.

A few bundles come with a detailed 16-page Activity Booklet containing insight into developmental patterns, reference to the Wall Model, grading options for Bean Bag related Activities, variations of activities to work on certain components (bilateral integration, midline crossing etc.) and much more! Most of the activities listed in the Booklet can be played both inside and outside. They are easy to use and don't require a lot of preparation. Some activities would be best for one-on-one therapy; other activities would be better with a group of children; either in group therapy or a classroom setting.

**Our Bean Bag Bundles are outlined below:**

**Standard Bean Bags**

**Standard 5pc; R139**

**Standard 10pc; R269**

**Standard 20pc; R499**

**Standard 30pc; R655**

**Velcro Bean Bags**

**Velcro 10pc; with Shapes;  
R340**

**Velcro 10pc; with Numbers;  
R355**

**Velcro 10pc; with Shapes  
and Numbers; R419**

**Velcro 20pc; with Shapes  
and Numbers; R649**

**Numbers Add-On Pack; R90**

**Shapes Add-On Pack; R79**

**Tic Tac Toe Add-On Pack;  
R90**

**Activity Booklet; R90**

## Other Bean Bags

**Multicoloured Cotton  
Bean Bags 10pc; R295**

**10pc Standard +  
8pc Polycotton; R369**

**Sensory Bean Bags 10pc  
One Sided: R339; Double Sided: 369**

Our Sensory Bean Bags are a must-have resource in every therapy room and home for individuals with sensory needs! Different fabrics are used on each Bean Bag to create sensory stimulation. They are great for children with sensory needs as well as for adults with advanced stages of Dementia.

---

## Face Masks

Disclaimer: This Fabric Face Mask is not intended to replace Surgical or N95 Face Masks. These Fabric Masks aim to free up the demand of surgical masks for people who have direct contact with patients with Covid-19 or for patients with Covid-19 themselves. Fabric Masks are merely a crisis response option when other supplies have been exhausted.

### Features:

- Fabric Face Masks are made from double-layered tightly woven 100% Cotton with a layer of non-woven interfacing to act as a barrier for droplets from both directions.
- The mask is reusable/ washable.
- There are three sizes – Male, Female and Children
- Various colours available (see below)
- Choose whether you would like your elastic around the ears/ around the head
- **One mask is donated to local NPO's for every 10 sold**

Price: Masks are R49 each. Discounts apply for large orders.

---

## Communication Masks

55% of communication is Visual. Traditional masks prevent our ability to see facial expressions and emotions, catch visual cues, and communicate accurately.

We have all struggled with communication in some way when wearing masks during the Covid-19 Pandemic. However, those who are deaf or hard of hearing have struggled the most as they now face new challenges when communicating. One of the main areas of Communication and Sign Language is facial expressions, which traditional face masks inhibit.

Our Communication Masks are great for those who are deaf or hard of hearing as well as their close friends and family members, those that work with the elderly, teachers and lecturers, Speech and Language Pathologists, Audiologists, Occupational Therapists and many more!

Have a look at our video that we have created on Facebook and Instagram IGTV on the Communication Mask:

<https://fb.watch/v/139Vi6rCO/>

Various colours available (see Page 19 for Available Colours).

Our Communication Masks are R75 each. Discounts apply for large orders.

---

## The Bed Ladder

Our Bed Ladders are the only Bed Ladders in South Africa which are locally and industrially made; and we're pretty proud of that! This makes them more affordable than those that are imported into the country; thus more accessible to people with disabilities in South Africa.

Whilst in hospital, one may become familiar with the "Monkey Bar" above the bed that is used for Bed Mobility. However, this can become costly to install at home, it is not portable for those that may wish to travel and it is not economical for those that only need bed mobility assistance temporarily (E.g. those who are pregnant/ recovering from an injury or surgery). The Bed Ladder serves the same purpose; however, it is more cost effective, easier to install and portable!

### Purpose

- The Bed Ladder provides bed mobility independence as it allows individuals to incrementally rise to a seated position without any assistance from other individuals.
- The Bed Ladder can provide assistance for the following: individuals with Spinal Cord Injuries, those who experience lower limb and trunk muscle weakness/ limited range of motion, individuals post injury/ surgery, pregnant women, individuals suffering from back problems, the elderly, or those with general difficulties with bed mobility.
- The Bed Ladder makes the task of sitting up in bed effortless. It offers extra support and prevents bed mobility-related injuries.
- It is at the seated position, that an individual is able to participate in Activities of Daily Living (ADL's) and Leisure Activities; thus gaining independence.

---

## **Features**

- The Bed Ladder is manufactured using high-quality webbing and Industrial Machines, making it durable and reliable.
- Polypropylene Webbing is used as this material repels water, is easier to clean and is more mildew resistant than nylon webbing.
- The Universal Design is compatible with most bed frames and individual needs.
- The Bed Ladder has five durable and flexible, non-slip handles, providing a secure and comfortable grip whilst pulling oneself up.
- The Bed Ladder can be easily installed onto a bed leg or bed frame using the secure Side-Release Buckle (as shown in the image).
- Sliders are placed on each side of the Buckle to allow the straps to be adjustable. This ensures it suits the individual's preferences and varying bed heights. Customise the length of the bed ladder from 1.7m to 2.3m.
- The Bed Ladder is portable; allowing for use in hospital, at home or on holiday.
- For those with limited hand function, the rungs of the ladder are placed further enough apart to slip one's arm through, to pull the body up without gripping onto the handles.
- The Bed Ladder can be hooked onto a hook (not included) on the bed base when the Bed Ladder is not in use. This ensures it is easily accessible when needed. A Shelf L-Bracket could be used, as shown in the image.
- Each Bed Ladder is individually packaged with instructions for the user.

**The Bed Ladder is R250. Discounts apply for Orders of 5 or more.**

---

## The One-Handed Hair Tie

### Purpose

- Provides independence in hair tying for those living with affected upper limb mobility and strength.
- The One-Handed Hair Tie can be used with conditions such as: Amputations, Cerebral Palsy, Hand Injuries, broken shoulder/ arm/ wrist/ fingers, Multiple Sclerosis, Ehlers-Danlos Syndrome, Parkinson's Disease, Amyotrophic Lateral Sclerosis (ALS), Congenital Conditions, Upper Limb Hemiparesis/ Hemiplegia, Phocomelia, Arthritis and Repetitive Strain Injuries to mention a few.
- Increased independence for people with disabilities ultimately results in a sense of freedom, fulfilment and self-worth where the individual feels more accomplished in their everyday tasks.

## **Features**

- The One -Handed Hair Tie consists of a long elastic and a toggle.
- The toggle creates a sliding loop that goes over the head.
- On the other end, there is another loop which is used to grip onto, what we refer to as, an “anchor”. This assists in creating the required tension to form the ponytail.
- The following can be used as an “anchor”: a prosthesis, a door handle, residual limbs, a paralysed arm, toes/ feet, casts and splints or parts of wheelchairs.
- The Hair Tie stays comfortably in the hair for the duration of the day, as long as it is pulled tight.
- It’s as easy as 1,2,3,4!
  1. Headband; 2. Anchor; 3. Pull; 4. Wrap
- Black is the only colour available until further notice.
- Each One-Handed Hair Tie is individually packaged with instructions for the user.

## **How do I know if it will work for me?**

There are several methods of using the One-Handed Hair Tie to suit different abilities. The different methods also depend on the availability and effectiveness of different “anchors” for different users.

Generally, the user will be required to:

- Be able to put a headband on
- Be able to reach the back of the head with one upper limb (to guide the ponytail into the desired position, and to wrap the end of the elastic around the ponytail)
- Have adequate muscle strength in one upper limb to pull the elastic tight

Please have a look at our videos on our website and social media pages in order to get a better idea of the One-Handed Hair Tie.

If you are unsure whether the One-Handed hair tie will be suitable for you and your abilities, please drop us a line on [info@forgoodhope.co.za](mailto:info@forgoodhope.co.za). Please include images and some background information. We would love to brainstorm with you!

## **Sizing**

The One-Handed Hair Tie comes in one size. Once the user has determined which method works best; they may wish to trim the elastic shorter. Instructions for this will be included with the parcel.

## **Price: R59 each**
